OXVA NeXLIM 2 vs VOOPOO Argus G4: Full Comparison

Two of the strongest pod kit launches of 2025 are now sitting side by side on the Tidal Vape shelves, and they are closer in price and ambition than you might expect. The Oxva Nexlim 2 at one end, building on one of the best-selling pod kits of last year. The VooPoo Argus G4 at £25.99, the latest evolution of the most reliable pod kit series VooPoo has ever made.

Both are TPD-compliant for the UK market. Both have serious batteries. Both use advanced coil technology and cover MTL through to RDL. Choosing between them is a genuine decision rather than an obvious one, so here is the full breakdown.

Specs Side by Side

- **Price**
  1. **OXVA NeXLIM 2:** Available at Tidal Vape
  2. **VooPoo Argus G4:** £25.99
- **Battery**
  1. **OXVA NeXLIM 2:** 2000mAh
  2. **VooPoo Argus G4:** 1650mAh
- **Maximum Output**
  1. **OXVA NeXLIM 2:** 40W
  2. **VooPoo Argus G4:** 35W
- **Charging**
  1. **OXVA NeXLIM 2:** USB-C (5V/3A Fast Charging)
  2. **VooPoo Argus G4:** USB-C (5V/2A)
- **Display**
  1. **OXVA NeXLIM 2:** 0.85-inch TFT Colour Screen
  2. **VooPoo Argus G4:** 0.85-inch TFT Colour Screen
- **Pod Capacity**
  1. **OXVA NeXLIM 2:** 2ml (TPD)
  2. **VooPoo Argus G4:** 2ml (TPD)
- **Coil Options**
  1. **OXVA NeXLIM 2:** 0.6Ω and 0.8Ω UniTech 3.0 Dual Mesh Pods
  2. **VooPoo Argus G4:** 0.4Ω, 0.7Ω and 1.0Ω Multi-Ohm Cartridges
- **Airflow Control**
  1. **OXVA NeXLIM 2:** Stepless airflow slider
  2. **VooPoo Argus G4:** Adjustable airflow

- **Output Modes**
  1. **OXVA NeXLIM 2:** Boost Mode and Eco Mode
  2. **VooPoo Argus G4:** Smart Mode (Gene AI 3.0)
- **Pods Included**
  1. **OXVA NeXLIM 2:** Two pods (0.6Ω pre-installed, 0.8Ω spare)
  2. **VooPoo Argus G4:** Two pods
- **Materials**
  1. **OXVA NeXLIM 2:** Zinc Alloy and PCTG
  2. **VooPoo Argus G4:** Aluminium Alloy, Zinc Alloy and Leather
- **Activation**
  1. **OXVA NeXLIM 2:** Auto-draw
  2. **VooPoo Argus G4:** Auto-draw and button firing
- **Lanyard**
  1. **OXVA NeXLIM 2:** No
  2. **VooPoo Argus G4:** Yes

Design and Build

These two devices take noticeably different approaches to materials and feel.

The NeXLIM 2 uses a zinc alloy and PCTG combination. The zinc alloy chassis gives it a solid, dense feel in hand, and the PCTG panels keep the weight reasonable despite the larger battery inside. At 127.5mm tall it is slightly taller than the Argus G4's 121mm, and the profile is a little wider. It is a premium-feeling device without being heavy.

The Argus G4 offers considerably more material variety. The Aluminium Alloy version at 65g is the lighter and slimmer option, measuring 15.8mm wide. The Zinc Alloy version at 85g is noticeably heavier and 16.6mm wide, but it comes with leather panel finishes on the Black and Brown colourways that push the build quality into a different bracket entirely. If aesthetics and premium feel matter to you, the Argus G4 in Zinc Alloy with leather is the more striking device.

On colour options, the Argus G4 edges it: eight colourways across Aluminium and Zinc Alloy builds. The NeXLIM 2 has a smaller selection in its current colourway range.

Both feel well-built for the price point. Neither has cheap plastic components or flex under pressure. The NeXLIM 2 feels more uniform and purposeful. The Argus G4 feels more varied and premium depending on which variant you choose.

Battery and Charging

This is where the NeXLIM 2 takes a clear lead, and it is worth being direct about it.

The NeXLIM 2's 2000mAh battery is 350mAh larger than the Argus G4's 1650mAh cell. That is a 21% increase in capacity. In daily use, it means moderate vapers on the 0.8Ω pod in Eco mode will comfortably get through a full day without touching the charger, with capacity to spare. The Argus G4 is no slouch at 1650mAh, and for most moderate vapers it will also cover a full day, but the margin is real.

Charging speed also favours the NeXLIM 2. It takes 5V/3A input versus the Argus G4's 5V/2A, which means despite the larger battery, the NeXLIM 2 gets back to full in approximately 60 to 80 minutes. The Argus G4 takes around 55 minutes for its smaller battery. In practical terms, both are fast enough that a lunchtime charge tops either device up significantly.

If battery longevity is your main concern, the NeXLIM 2 wins this category without argument.

Pods and Coil Technology

This is where the two devices differ most fundamentally, and understanding the difference helps you work out which one suits your vaping style.

- **NeXLIM 2: UniTech 3.0 Dual Mesh**
  The NeXLIM platform uses dual mesh coil technology. Two heating elements sit inside each pod rather than one. In Boost Mode both fire simultaneously, doubling the active heating surface and producing denser, more flavour-rich vapour per draw. In Eco Mode the two elements alternate, reducing wattage and extending both battery life and pod longevity. The result in Boost mode is a flavour performance that genuinely competes with entry-level sub-ohm tanks, which is not something you can say about most pod kits.

The 0.8Ω pod covers MTL and tight RDL at 15 to 25W. The 0.6Ω pod opens into proper RDL territory at 30 to 40W in Boost. Pod life on the original NeXLIM with UniTech 2.0 was exceptional, with some users reporting over 8,000 puffs per pod. UniTech 3.0 is designed to improve on that further.

- **Argus G4: Multi-Ohm Cartridge**
  The Argus G4 takes a different approach. The Multi-Ohm Cartridge uses a single mesh coil but supports three distinct resistances in its pod range: 0.4Ω for an open RDL draw, 0.7Ω for a mid-range restricted draw, and 1.0Ω for tight MTL. The 0.4Ω and 0.7Ω switch via pod orientation, with the Gene AI 3.0 chipset detecting resistance automatically. The 1.0Ω is a separate cartridge.

  The breadth of coil options on the Argus G4 is wider than the NeXLIM 2. The 0.4Ω option in particular gives access to a more open draw style that the NeXLIM 2 does not cover as comfortably. If you want one device that covers tight MTL through to a genuinely open draw, the Argus G4's range is more comprehensive.

  For raw flavour intensity on a single draw, the NeXLIM 2 in Boost mode on the 0.6Ω pod is harder to match at this price. For versatility across multiple vaping styles from a single pod platform, the Argus G4 has the edge.

Vaping Experience

- **The NeXLIM 2** is at its best at a specific set of conditions: 0.6Ω pod, Boost mode, fully open airflow, freebase or 50/50 liquid at 3mg to 10mg. At those settings it produces vapour that feels qualitatively different to a standard single-mesh pod kit. For nic salt vapers, the 0.8Ω pod in Eco mode gives a smooth, consistent MTL draw that holds up all day.

  The auto-draw is reliable across all airflow settings, which is not always the case with stepless airflow systems where the draw can feel inconsistent at very tight settings. On the NeXLIM 2 it fires cleanly across the range.

- **The Argus G4** is more flexible day-to-day. The Gene AI 3.0 Smart Mode detects your coil and sets an appropriate wattage automatically, so you are not starting from scratch each time you insert a pod. The screen gives you real-time wattage, battery,

resistance, and puff count at a glance. The button activation gives you the option of manual firing, which some vapers prefer over pure auto-draw.

The 0.7Ω pod at around 20W on the Argus G4 is an excellent all-round setting that suits both nic salts at 10mg and freebase at 6mg. The 1.0Ω pod at 12 to 15W with 20mg nic salts is one of the better MTL experiences in a pod kit at this price.

Which One Is Right for You?

Buy the OXVA NeXLIM 2 if you:

- Want the largest battery on either device
- Vape heavily and need all-day capacity with confidence
- Want maximum flavour intensity from a pod kit
- Prefer auto-draw activation
- Vape primarily on nic salts at 0.8Ω or freebase on the 0.6Ω in Boost mode

Buy the VooPoo Argus G4 if you:

- Want the widest range of coil resistance options in one device
- Vape across multiple styles from tight MTL to open RDL
- Want the option of a premium leather and Zinc Alloy build
- Prefer button activation alongside auto-draw
- Want wattage adjustment via the screen and Smart Mode guidance

Final Thoughts on these two pod kits

Both are excellent pod kits and both will serve you well at Tidal Vape. The NeXLIM 2 wins on battery size, charging speed, and peak flavour intensity from the dual mesh coil in Boost mode. The Argus G4 wins on coil versatility, material options, and overall flexibility across different vaping styles.

If your main priority is a device that lasts all day and delivers the most flavour per puff, go with the NeXLIM 2. If you want one device that covers the full range from cigarette-tight MTL to a genuinely open draw, the Argus G4 is the better fit.

Both are in stock now at Tidal Vape with two free e-liquids included.
